

NIGHTWING

SIGNALBRIDGE

ADVANCED COMMUNICATIONS KITS TO MEET UNIQUE MISSION REQUIREMENTS AND BUDGETS FOR CUSTOMERS WORLDWIDE

Nightwing's SignalBridge mobile communications suite kit & services is an integrated software and hardware kit providing secure communication (voice/data/video), geospatial information, and network capabilities designed to meet user requirements in global operational environments. All SignalBridge components are commercially available/exportable COTS hardware and software configured and packaged to align with specific mission requirements. SignalBridge takes advantage of different network types (Cell/Sat) to provide redundant communication options worldwide. Available support includes Network Engineering services, Managed Attribution (Network and procurement), Cyber tools, Application development, and Full spectrum Field Service, training, and logistics support.

OVERVIEW

The SignalBridge is both a product and services offering. The deployable kit has integrated, customer defined HW and SW components. Nightwing offers full-spectrum services and support for the employment of the SignalBridge both in CONUS and OCONUS.

SignalBridge is based on an extensive Program of Record that currently provides a United States Government customer with deployable situational awareness kits to track, securely communicate, and transmit information in challenging operational environments. Nightwing Field Service Representatives (FSRs) are all former military special operations personnel that currently provide full-spectrum services and support for the custom kitting, configuration, employment of this capability worldwide.
