

NIGHTWING

SIGNALBRIDGE

ADVANCED COMMUNICATIONS KITS TO MEET
UNIQUE MISSION REQUIREMENTS AND BUDGETS
FOR CUSTOMERS WORLDWIDE

Nightwing's SignalBridge mobile communications suite kit & services is an integrated software and hardware kit providing secure communication (voice/data/video), geospatial information, and network capabilities designed to meet user requirements in global operational environments. All SignalBridge components are commercially available/exportable COTS hardware and software configured and packaged to align with specific mission requirements. SignalBridge takes advantage of different network types (Cell/Sat) to provide redundant communication options worldwide. Available support includes network engineering services, managed attribution (network and procurement), cyber tools, application development, and full spectrum field service, training, and logistics support.

OVERVIEW

Built primarily on commercially available and exportable COTS technologies, with integration of exportable GOTS components available for U.S. Government customers, SignalBridge is configured and packaged to align with specific operational needs. The solution leverages hybrid path diversity across cellular and satellite networks to provide uplink redundancy and ensure resilient, worldwide connectivity in austere and complex environments.

SignalBridge is both a product and a full-spectrum services capability. Nightwing provides comprehensive support including network engineering, managed attribution services (network provisioning and procurement), cyber tools and application development, as well as field services, training, and logistics support.

SIGNALBRIDGE SERVICES & SUPPORT

Technical & Network Support

- Data services
- Network architecture
- Engineering services

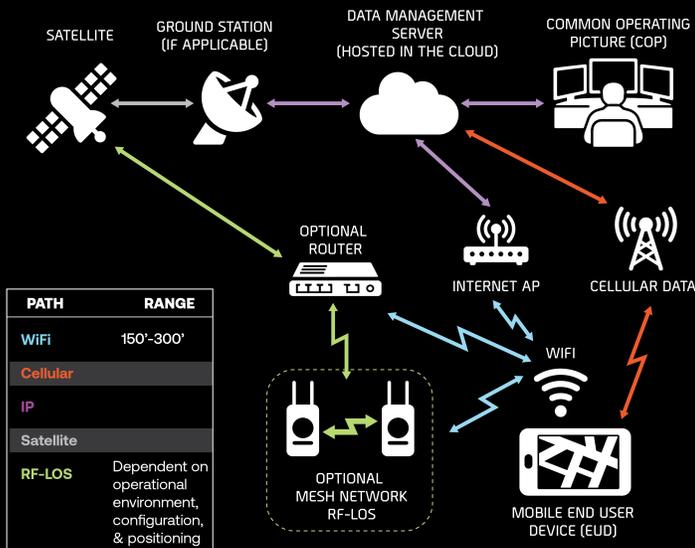

Field & Operational Support

- Technical field services
- Training packages
- Integration, configuration, and device management
- Operations center support

Logistics & Sustainment

- Logistics services and support
- Help Desk support
- Managed attribution/purchasing for HW, SW licenses, and data services

BASE COMPONENTS

All SignalBridge components are commercially available/exportable COTS hardware and software configured, packaged, and selected by customers to meet their unique operational requirements. **

- Custom Deployable Case
- Android/iOS Phones
- Android/iOS Tablets
- Laptops
- SATCOM (w/Airtime Services)
- MANET/Mesh Radios
- Common Operating Picture (e.g TAK)
- Mobile Apps for End User Devices (e.g. ATAK mobile apps)
- Support connections for cloud or on-prem closed system IP based comms systems
- Charging Station(s)

** Integration of exportable GOTS capability is available for USG Customers

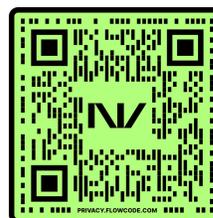

OVERVIEW Continued

Based on an active U.S. Government Program of Record, SignalBridge currently supports a Department of War customer with deployable situational awareness kits that enable secure tracking, communications, and information sharing in challenging operational environments. Nightwing Field Service Representatives—comprised of former Special Operations Forces personnel—deliver end-to-end support worldwide, including custom kitting, configuration, deployment, and operational employment.

KEY BENEFITS:

- Modular, mission-tailored design
- Exportable, customizable COTS technology **
- Intuitive web-based interfaces
- Hybrid uplink redundant communication paths
- Secure mobile mesh networking
- C3 mission planning tools
- Tailored services, support, and training
- Packaged, deployed, and supported from Nightwing technical integration facilities
- Assembled in the USA by U.S. Military SOF Veterans
- Proven through an active U.S. Government Program of Record

** Integration of exportable GOTS components is available for USG customers
