## Cyber Threat Intelligence & Proactive Threat Hunting

*Transforming threat data into actionable defense for unmatched cyber resiliency.*

### OVERVIEW

#### THE MANDATE FOR PROACTIVE DEFENSE

Today's critical operations are facing a cyber threat landscape defined by unprecedented speed, scale, and sophistication.

Adversaries, from ransomware syndicates to nation-state advanced persistent threats (APTs), are industrializing their operations. By leveraging AI-generated attacks and "Living-off-the-Land" (LOTL) techniques that weaponize legitimate administrative tools like PowerShell, they easily bypass traditional, signature-based defenses.

A reactive, indicator-based defense posture is no longer sufficient. Organizations are overwhelmed by alert fatigue, struggling to separate critical signals from the noise.

ShadowScout is the premier threat intelligence service that bridges the gap between raw data and operational defense, delivering actionable insights and applied threat hunting to Security Operations Centers (SOCs) of every scale.

#### SHADOWSCOUT DELIVERS:

- **Actionable Technical Intelligence**  
Proprietary SIEM and EDR logic, custom STIX/TAXII IOC feeds, malware reverse engineering, and deep vulnerability research.
- **Strategic & Executive Awareness**  
Weekly technical highlights, monthly industry threat landscapes, and strategic briefings tailored for leadership and risk decisions.
- **External Attack Surface Visibility**  
Continuous dark web leak monitoring, brand protection (social media/domain spoofing), and external attack surface monitoring to identify soft spots before they become breaches.

***Persistent threat hunting has become a cornerstone of modern cyber defense, giving defenders a fighting chance to find intruders before they find what they came for.***

## THE SHADOWSCOUT ADVANTAGE

Previously part of a Fortune 100 company, ShadowScout brings over 40 years of proven expertise in securing networks to national security standards. Now, we apply that same level of rigor to protect the commercial and critical infrastructure sectors.

- **Applied Intelligence:** Our proven expertise in protecting the world's most targeted networks provides unmatched high-fidelity detection capabilities.
- **Detection-as-Code:** Indicators of Compromise (IOCs) alone lack context. We map and trace adversary behavior to the MITRE ATT&CK® framework, creating portable detection logic tailored to your specific tools including Splunk, Microsoft Sentinel, CrowdStrike, SentinelOne, and Elastic.
- **Elite Expertise:** Our seasoned team of cleared experts, incident responders, and top-tier researchers, acts as a true force multiplier for your security team.

## INTELLIGENCE IN ACTION – APPLIED THREAT HUNTING

Cyber resiliency demands operationalized intelligence through threat hunting. Our AI-assisted systems automate ingestion, deduplication, and distribution of lower-level indicators, freeing elite human threat hunters to proactively uncover hidden adversary behaviors. The result is significantly reduced dwell time and a stronger, more resilient infrastructure.

## YOUR FULL-SPECTRUM CYBER DEFENSE PARTNER

ShadowScout seamlessly integrates with Nightwing's comprehensive suite of cybersecurity services, allowing you to consolidate vendors with a highly capable and trusted mission partner.

- **Managed Security Services (MSS):** Machine-speed threat hunting and SOC operations.
- **Digital Forensics & Incident Response (DFIR):** Rapid triage, command, and recovery.
- **Vulnerability Management & Penetration Testing:** Identifying vulnerabilities before an attacker does.
